EXAMINER [signature] DATE CONSIDERED 11/4/02

EXAMINER: Initial citation considered. Draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant.

AA Veillette appears to disclose an axially and radially controllable magnetic bearing for use in controlling operation of a rotor within a stator.

AB Telle discloses a radial magnetic bearing having iron rings alternating with magnetizing rings on both a rotor and stator.

AC Wasson apparently discloses a radial magnetic bearing having iron rings and radially polarized magnets alternated with axially magnetized rings on both a rotor and stator.

AD Moon et al. disclose a superconducting rotating assembly with a floating rotor having magnetic poles at each end resting on bearings.

AE Rao apparently discloses a superconducting coil bearing for a rotor thrust load having directly opposing coils mounted on a rotor and stator.

AF Hennessy et al. apparently disclose a large gap magnetic suspension system with superconducting coils.

AG Moon discloses a superconducting levitating bearing.

AH Arrendale et al. appear to disclose a thermoelectric method and apparatus for charging superconducting magnets.

AI Stucker discloses a magnetic bearing assembly having repulsing magnetic fields generated between inner and outer housings.

AR Eshbach teaches the effect of low temperatures on superconductive materials.

Respectfully submitted,
Walter Reiner, Assignee
